

Microweigh Blend

Multiple hopper control

Utilising their well-proven and internationally popular Microweigh technology, Garnett Controls offer multiple hopper control via an integrated central control system.

The Garnett Controls Microweigh Blend system can incorporate any number of new or existing hopper feeds.

Simple systems can take the form of a master hopper with satellite 'slave' hoppers synchronised from the master. Further integration can be achieved by the use of a central PC based control station.

Microweigh Blend controls the dosing of different components from different hoppers in a continuous blending line. The leading microweigh technology ensures optimum accuracy in the dispensing of individual blend components.

Features

- ~ Precise dosing of blend components
- ~ Central or remote user interface
- ~ Popular Microweigh technology
- ~ Batch counting
- ~ Modular upgradeable system
- ~ Can be installed on any new or existing hopper feeds

Benefits

- ~ Real time management information
- ~ Control of yields
- ~ Control of quality
- ~ Control of high cost blend equipment
- ~ Reduced costs
- ~ Improved efficiency
- ~ Improved reliability
