Control Panels

Garnett Controls Ltd manufactures control panels in its own dedicated facility.

The company has a wealth of experience in the layout, design, functionality, ergonomics, reliability, EMC profiles and safety.

In addition to the well-known range of weight control systems, Garnett also manufactures a wide range of control panels for new and existing machines.

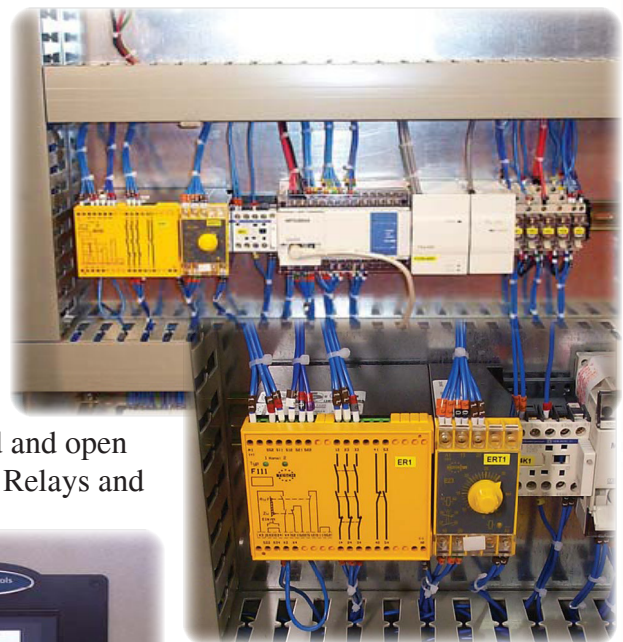

In many cases, significant cost savings can be achieved by replacing old inefficient control systems with the latest 'State-of-the-Art' units.

Garnett's design team can produce dedicated control solutions for single or multiple applications.

The technical expertise of the company ensures a full understanding of production line requirements, operational aspects and operator awareness. From design to commissioning, our technicians work together with plant engineers to ensure customer satisfaction. Safety is paramount at Garnett Controls and all our panels and systems meet with the machinery safety directive and EMC directive.

Our co-operation with "Electrical and Electronic Centres of Excellence" ensure our test facilities are first class.

From touch Screens to Human Interface Units (HMI), Latest Energy Efficient Inverter Technology with closed and open loop systems, Interlock devices, PLC Control to Simple Relays and Switches.

System panels also have energy saving designs to reduce energy consumption and climate levy charges.
